Q1/7 QUESTION 1 OF 7

THE CLOCK IS THE MOAT.

Tightening noise regulation is turning measurement into a licence condition. Whoever instruments venues first owns the operational data latecomers cannot buy back.

TA LAERM - COMMONLY CITED IMMISION LIMITS (dB[A] AT THE RECEPTOR)

PROTECTED ZONE	DAY 06-22	NIGHT 22-06
General residential	55	40
Urban / mixed core	60	45
Pure residential	50	35

A 40 dB(A) night limit at the neighbour's wall is not checkable with a clipboard. It is only checkable with instruments.

WHY NOW

01 Regulatory ratchet: TA Laerm night limits bind at the receptor; complaints drive enforcement, not statistics.

02 Displacement is documented: resident complaints and land-use conflict put venues on the LiveKomm Red List.

03 Sensor economics: a full-stack sensor costs EUR 199 - measurement is now cheaper than one dispute.

04 The fleet that logs first owns the baseline data. Second entrants start from zero history.

Q1/7 QUESTION 1 OF 7

VENUES MUST MEASURE. NOBODY SELLS MEASUREMENT.

WHAT OPERATORS RUN ON TODAY

CLIPBOARD
hand-written sound notes, gaps everywhere

PHONE DB APPS
untrained mic, no log, no occupancy, no defence

HOPE
the night stays quiet and the neighbour stays calm

INVOICE
point solutions measure one thing, once, per incident

THE GAP IS REAL - EVIDENCE

40 venue interviews conducted

5 design-partner LOIs signed

120 venues on the waitlist

Honesty rule: no verified national count of noise-driven closures exists. The risk we serve is documented displacement - complaints, restrictions, land-use conflict (LiveKomm Red List). We do not need a fake statistic: every operator we interviewed lives next to somebody.

Q1+3

QUESTION 1 OF 7

DEFENSE: COMPLIANCE NOBODY CAN FAKE AFTER THE FACT.

WHAT A VENUE GETS ON DAY ONE

24/7 SOUND RECORD
calibrated ESP32-S3 sensors log levels continuously, at the receptor-relevant metric

TIMESTAMPED LEDGER
every reading carries a time and a device - the record predates any complaint

AUDIT EXPORT
one click produces the file an Ordnungsamt asks for, months after the night

CONTEXT, NOT JUST dB
occupancy and environmental conditions sit beside every reading

HOW OPERATORS RESPOND (Q3): they stop treating the sound question as weather. The dashboard is checked before the neighbour calls, and the export is attached to the reply.

Product capability claims per clubins-hack README; illustrative dashboard, no real product screenshots

Q3/7 QUESTION 3 OF 7

OFFENSE: OPERATIONAL DATA COMPOUNDS NIGHTLY.

THE SAME SENSORS, A SECOND LIFE

NIGHT N
sound + occupancy + environment logged

->

BASELINE
the venue's own normal emerges

->

DECISIONS
staffing, ventilation, peak hours, closing calls

->

LOCK-IN
history no competitor can backfill

COMPOUNDING, MECHANICALLY:

Every night adds rows. After one quarter the venue owns a baseline no survey can reconstruct; after one year, switching means losing the only record that defends it. The data flywheel is the moat - the sensor is just the door.

WHO USES IT (Q3): venue staff and owners - the people on the floor at 01:00, not a consultant next quarter.

Q4/7 QUESTION 4 OF 7

EUR 149 A MONTH PER VENUE. HARDWARE EUR 199 ON DAY ONE.

EUR 149
PER VENUE / MONTH, SUBSCRIPTION

EUR 199
PER SENSOR, ONE-TIME

WHAT THE CUSTOMER WORTH PICTURE LOOKS LIKE	VALUE	STATUS
Pilot-to-paid conversion	80%	PLACEHOLDER
Venues on the waitlist	120	PLACEHOLDER
Pilot venues installing	3	PLACEHOLDER / Q1 2027
Design-partner LOIs signed	5	PLACEHOLDER

WHAT IS EACH CUSTOMER WORTH? A recurring EUR 149 relationship - hardware opens the account, the subscription is the value.

Q5/7 QUESTION 5 OF 7

CONTRIBUTION PER VENUE IS A SUBSCRIPTION, NOT A LICENSE.

UNIT ECONOMICS - REGISTER VALUES ONLY, LABELED ARITHMETIC

LINE	VALUE	DERIVATION
Subscription revenue / venue	EUR 149 / month	register
= per venue per year	EUR 1,788	149 x 12 (derived)
Hardware revenue / sensor	EUR 199 one-time	register
Hardware payback on subscription	~1.3 months	199 / 149 (derived)

WHY 'SUBSCRIPTION, NOT LICENSE' IS THE LOAD-BEARING CHOICE

A license sells once and sleeps. A subscription renews monthly against a service the venue can verify on its own dashboard - the instrument either earns its EUR 149 this month or it does not. Hardware is priced at EUR 199, not subsidized: the account pays for its sensor in ~1.3 months of billing.

NOT CLAIMED: cost of goods, CAC, or gross margin - no register value exists for these yet.

Q6+7 QUESTION 6 OF 7

THE FIELD: SPREADSHEETS, DECIBEL APPS, POINT SOLUTIONS.

CAPABILITY GRID - THE COMPARISON IS THE ART

OPTION	CONTINUOUS	OCCUPANCY	ENVIRON-	COMPLIANCE	OPS DATA	DEFENSIBLE
Clipboard / spreadsheets	NO	NO	NO	NO	NO	NO
Phone decibel apps	PART	NO	NO	NO	NO	NO
Point sound solutions	YES	NO	NO	PART	NO	PART
Clubins full stack	YES	YES	YES	YES	YES	YES

GRID READS AS A VERDICT: every incumbent is a partial answer. The only row with no NO is the row that also owns the history. That asymmetry is what the field cannot copy: **sound levels alone are copyable; five years of paired sound + occupancy + environment is not.**

Q2/7 QUESTION 2 OF 7

WHY WE WIN: FULL STACK FROM FIRMWARE TO DASHBOARD.

CAN THIS TEAM BUILD THE COMPANY? THE STACK, ALL OURS:

- ESP32-S3 + RUST FIRMWARE
- GO INGESTION
- CLICKHOUSE
- FLUTTER (WEB / ANDROID / IOS)
- NIXOS INFRA
- ZITADEL AUTH

THE TEAM

PATRICK HAUSSMANN
Munich - founder, product & platform

SWIFTB0Y
Berlin - engineering

137 COMMITS
in the live repo - 92 + 45 (real, from the git record)

VALIDATED 2026-10-25: firmware, Flutter and Go checks passed on live infrastructure - dashboard / api / ingest / beta.clubins.de resolve.

Q6+7 QUESTION 6 OF 7

VENTURE MATH: ILLUSTRATIVE.

TUNGUZ'S UNDERWRITING THRESHOLDS - ILLUSTRATIVE BENCHMARKS, NEVER PROMISES

TUNGUZ THRESHOLD (ILLUSTRATIVE)	OUR REGISTER-ONLY ARITHMETIC
> EUR 100M annual revenue potential	100 venues x EUR 149 x 12 = EUR 178,800 ARR (2027 target, register)
	German bars & pubs: 32,455 enterprises x EUR 1,788 = ~EUR 58.0M ARR
	at full national penetration - BELOW the threshold from the beachhead alone
50-60% gross margin	subscription software structure; margin NOT claimed - no COGS register value
15-25% net margin	NOT claimed - no cost register values exist

THE HONEST VERSION OF IS THE MARKET VENTURE-SCALE:

The German bar-and-pub beachhead (Eurostat 2024, NACE I5630) does not clear EUR 100M ARR at EUR 149/venue/month by itself. The venture-scale case rests on category expansion - the venue operating system across Europe, benchmarked against external sensor markets: global commercial-building sensors $12.18B (2025) to $25.39B (2034), 8.5% CAGR (DataIntelo, commercial estimate - labeled, definitions differ, never summed).

Thresholds: Tom Tunguz (tomtunguz.com/pitch-deck) - illustrative underwriting guideposts, not projections.

 Sources: register arithmetic; Eurostat 2024 via Verified Market Size; DataIntelo (commercial estimate)

ASK

QUESTION S OF 7

EUR 500K TO START THE CLOCK IN TEN VENUES.

EUR 500,000

PRE-SEED / SAFE

USE OF FUNDS - 12 MONTHS RUNWAY, LINE BY LINE

ALLOCATION	REGISTER VALUE
Engineering hires	2
Sensor batch #2	200 units
Pilot venues	10

10 pilot venues installing (register pilot target)

2027 100 venues by end of 2027 (register venue target)

FLYWHEEL 10 venues of paired history the field cannot backfill

START THE CLOCK: pilot@clubins.de
