Win the basement, then the block.

Live sound, occupancy and environment data for venue staff.

A beachhead go-to-market for German venues: land one segment, then expand along the map.

▲PLACEHOLDER = REGISTER-TRACKED COMPANY FIGURE

Flagship clubs love the demo — pragmatic owners won't buy a promise.

Enthusiasts engage early — **40 interviews ▲, 5 LOIs ▲, 25 sensors ▲**. Enthusiasm is not a market.

Pragmatic owner-operators — the buyers who fund a business — buy on references inside their own segment, not on excitement. That gap is the chasm, and it does not close on its own.

THE PRIZE — GERMANY

≈2,000

live-music venues (2024/25); ≈1,200 under a narrower definition — excludes commercial discotheques

Initiative Musik Club Study, via miz.org

32,455

bars & pubs enterprises in Germany (2024)

Eurostat NACE I5630, via verifiedmarketsize.com

DIFFERENT CLASSIFICATIONS — NEVER SUMMED

The beachhead: basement venues, where noise exposure and thin margins collide.

PRAGMATIC BUYER CRITERIA

- **Noise-exposed rooms below or adjoining residences —** receptor limits bite hardest at night
- **Owner-operated: one decision-maker, short sales cycle**
- **Clustered on bar streets — reference density compounds**
- **Thin margins: the tool must prevent disputes, not decorate dashboards**

BASEMENT VENUES
THE BEACHHEAD

WHY THE BASEMENT

40 dB(A)

commonly cited night limit at the protected receptor for general residential areas under TA Lärm. Limits apply at the receptor — never inside the club; verify against official Table 1.

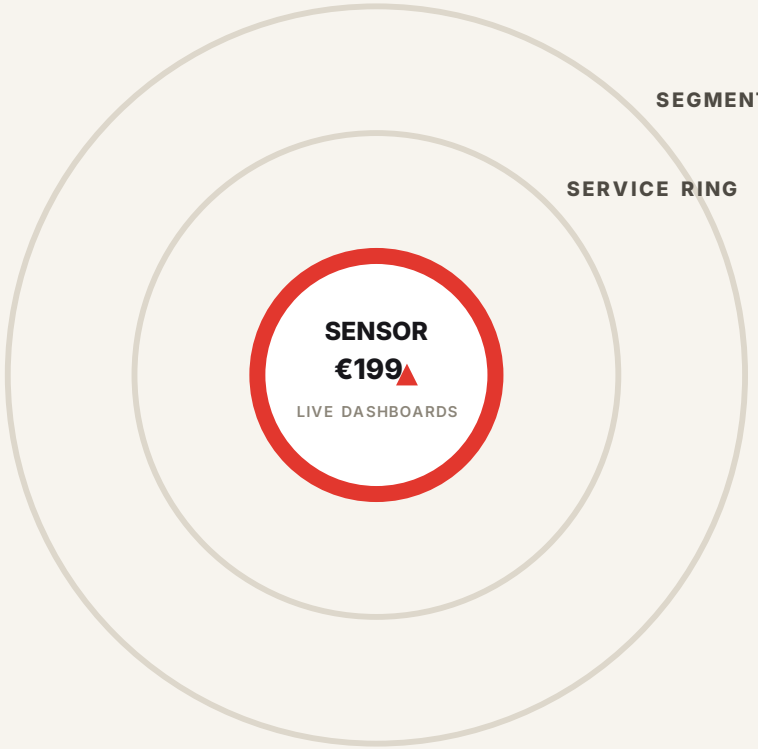

TA Lärm — commonly cited values, administrative framework

€8,000

median annual profit on €240,000 median turnover — German live-music venues, 2019

Initiative Musik Club Study, via miz.org

Pragmatists buy the whole product, not a sensor in a box.

1 · CORE

ESP32-S3 sensor + live dashboards: sound, occupancy, environment.

2 · SERVICE RING

Install & calibration · staff onboarding · dispute-ready sound reports · support

3 · SEGMENT RING

TA-Lärm-aware reporting · small-venue presets · multi-room setups.

€149▲ / venue / month **€199▲** / sensor

NOT YET IN SCOPE

Festival site control · chain rollouts · public displays

Prices are PLACEHOLDER values — register-tracked company figures

D-Day discipline: one segment, one message, concentrated force.

THE ASSAULT PLAN — USE OF FUNDS

€500,000

PRE-SEED · SAFE

funds 12 months of runway

- **2 engineering hires**
  firmware, ingestion, dashboard depth
- **Sensor batch #2 — 200 units**
  pool for the beachhead build-out
- **10 pilot venues**
  the landing force, 6 months post-raise

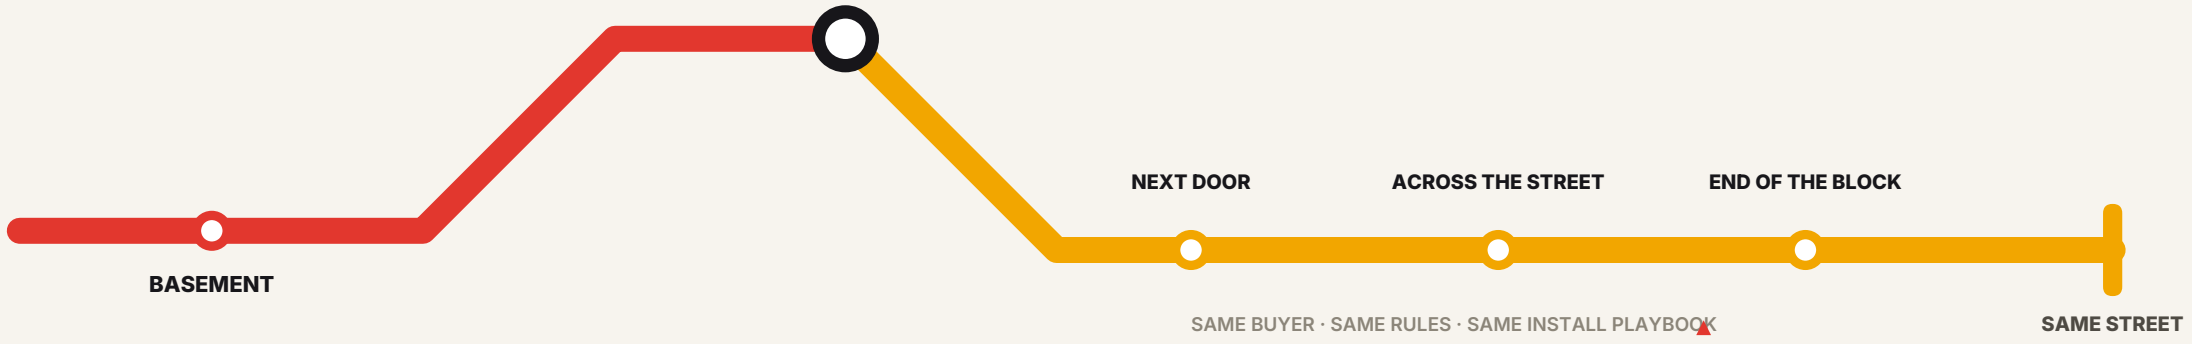

Every pin after the first is funded by the first.
Nothing diverts until the beachhead holds.

A reference travels one door at a time.

80%

of pilots convert to paid

Design partners become paying venues without hand-selling. Their neighbor watches the live readings over the bar and asks for the same box.

Conversion rate is a PLACEHOLDER value — register-tracked

PLACEHOLDER = REGISTER-TRACKED COMPANY FIGURE

Bigger rooms, the same receptor limits.

BERLIN · CLUBCOMMISSION SURVEY 2023

73%

of Berlin clubs still below pre-pandemic revenue

89%

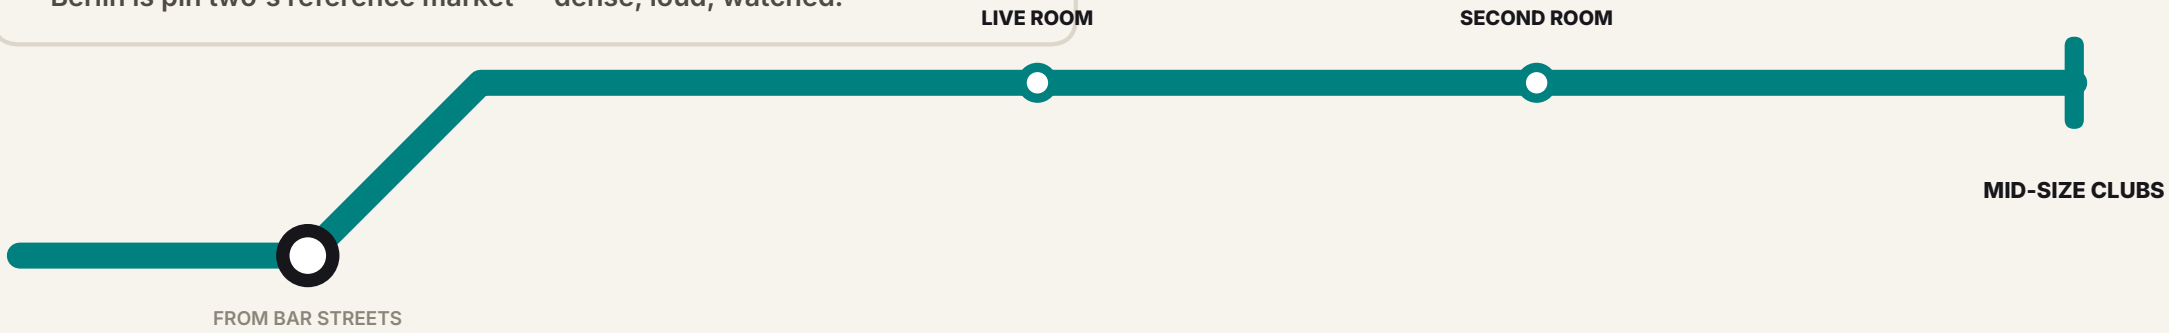

report higher costs; 20% fewer guests

Clubcommission Berlin survey (2023), via miz.org — Berlin-specific survey, not a national figure

Berlin is pin two's reference market — dense, loud, watched.

WHY CLUBS DIFFER FROM BAR STREETS

More rooms, longer nights — and the same receptor limits at the facade. One venue becomes a multi-sensor deployment: same playbook, same compliance conversation, more rooms per order.

Source: Clubcommission Berlin survey (2023) via miz.org — Berlin-specific survey data

▲PLACEHOLDER = REGISTER-TRACKED COMPANY FIGURE

Same hardware, seasonal surge capacity.

Festivals run the same receptors off-site: back-of-house gates, staff areas, curfew monitoring. The deployment is seasonal — the hardware pool is not.

One batch serves three segments: venue installs run all year; festival deployments stack on top in summer.

BUILT ONLY AFTER PINS ONE AND TWO

Requirements documented during beachhead pilots — nothing speculatively built for a segment we haven't sold.

200 UNITS

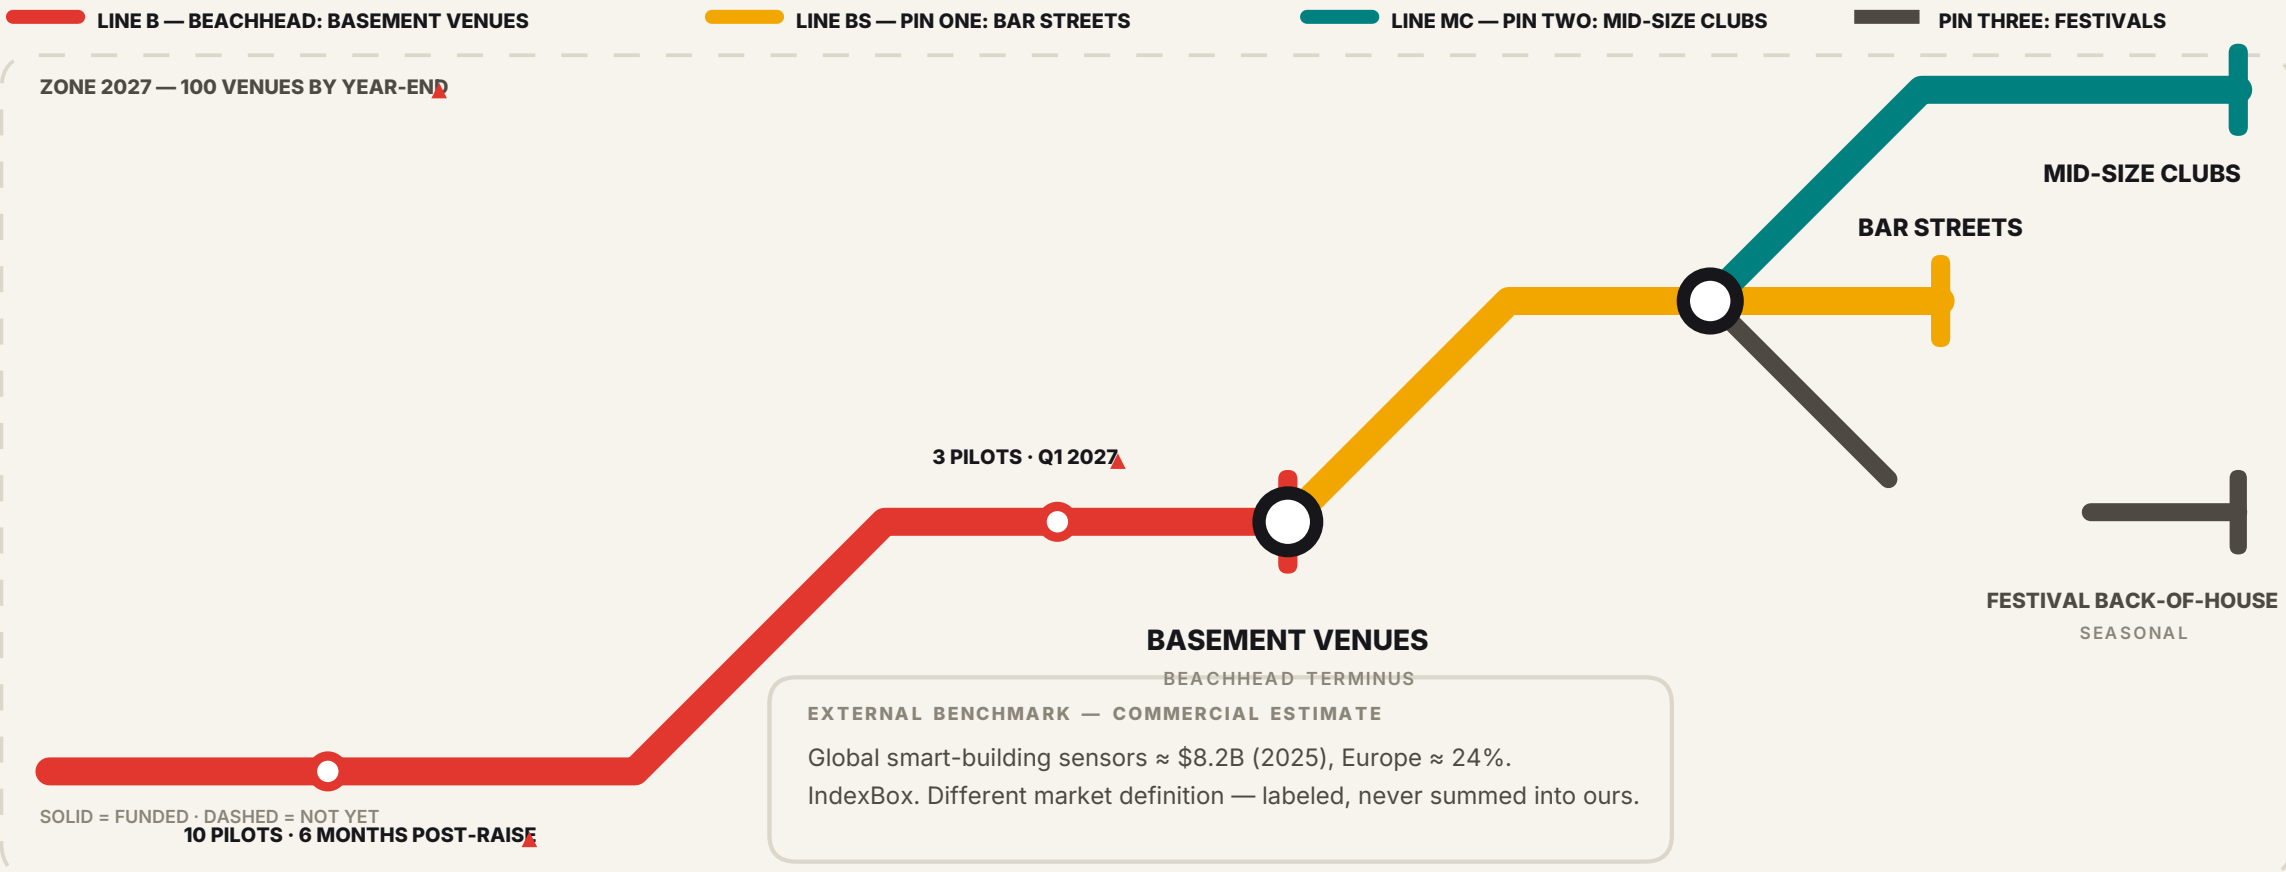

one batch, pooled across three segments

Batch size is a PLACEHOLDER value — register-tracked

▲PLACEHOLDER = REGISTER-TRACKED COMPANY FIGURE

Each pin funds the next.

▲PLACEHOLDER = REGISTER-TRACKED COMPANY FIGURE

References inside the segment are the only marketing that compounds.

TRACKED EVIDENCE — ALL PLACEHOLDER

- 40 venue interviews▲
- 5 design-partner LOIs▲
- 3 pilots installing Q1 2027▲
- 120-venue waitlist▲
- 25 sensors produced▲

THE SEGMENT IS REAL

€1.1B turnover · 45,000 employees · ~50M visitors a year — German live-music venues, 2019

Initiative Musik Club Study, via miz.org

THE HONESTY RULE

Noise is documented displacement risk: resident complaints, arrival and departure, smoking areas (LiveKomm Red List; Live-DMA/MIZ). No verified national noise statistic exists — we don't manufacture one. We measure what venues can act on.

Sources: Initiative Musik Club Study via miz.org (2019) · LiveKomm Red List / Live-DMA via miz.org

▲PLACEHOLDER = REGISTER-TRACKED COMPANY FIGURE

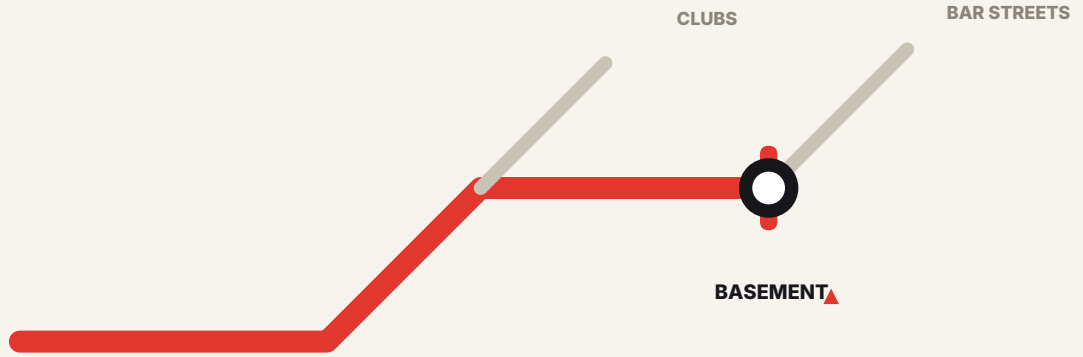

Fund the crossing: €500k to take the basement, then the block.

€500,000

PRE-SEED · SAFE

- 12 months of runway
- First milestone: 10 pilots within 6 months post-raise
- Horizon: 100 venues by end of 2027

Concentrated force, one segment, until the basement holds.
Then the map opens: bar streets, mid-size clubs, festivals.

WHO IS ON THE MAP

Patrick Haußmann
Munich — founder, product & platform

Swiftb0y
Berlin — engineering

Team of 2 · Founded 2025 · Munich

Full-stack today: ESP32-S3 sensors, Rust firmware, Go ingestion, ClickHouse, Flutter dashboards — validated end to end, October 2026.
