PRE-SEED BRIEFING · MUNICH

The night runs on data.

Live sound, occupancy and environment data for bars and clubs.

clubins

PURPOSE

Nightlife runs on instinct. It shouldn’t.

Clubins turns sound, crowds and air into live, usable data.

THE PROBLEM

Owners learn about their Saturday on Tuesday.

Occupancy, noise and air are felt in the moment — and analyzed far too late.

THE PROBLEM · NOISE

Noise complaints end venues, not parties.

73% of Berlin clubs are still below pre-pandemic revenue.

Sources: Clubcommission Berlin 2023 · LiveKomm Red List

THE SOLUTION

Sensors that listen. Answers that arrive live.

SOUND · OCCUPANCY · ENVIRONMENT

Grounded in 40 venue interviews · 5 design-partner LOIs signed.

THE PRODUCT

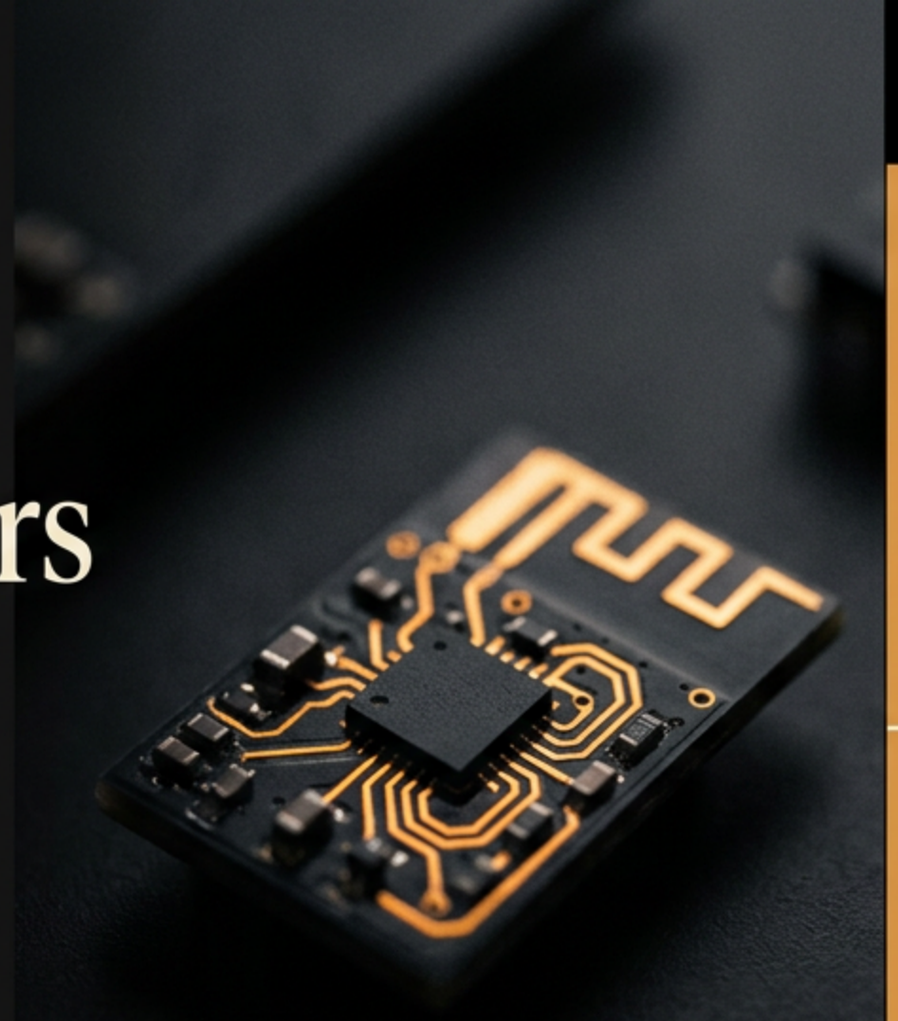

From sound pressure to a decision in three taps.

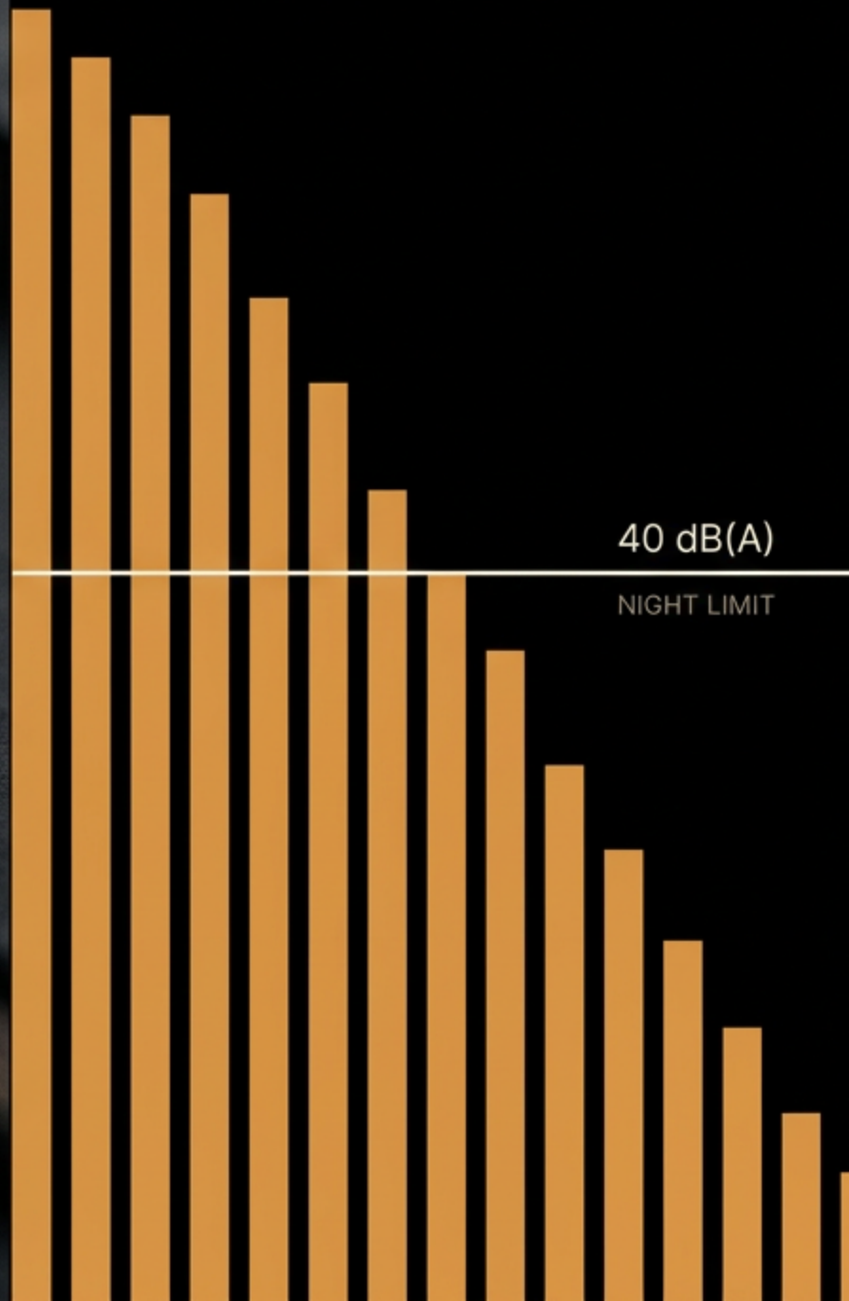

WHY NOW

Cheap sensors finally meet strict limits.

ESP32-class sensors now meet TA Lärm night limits of 35–40 dB(A).

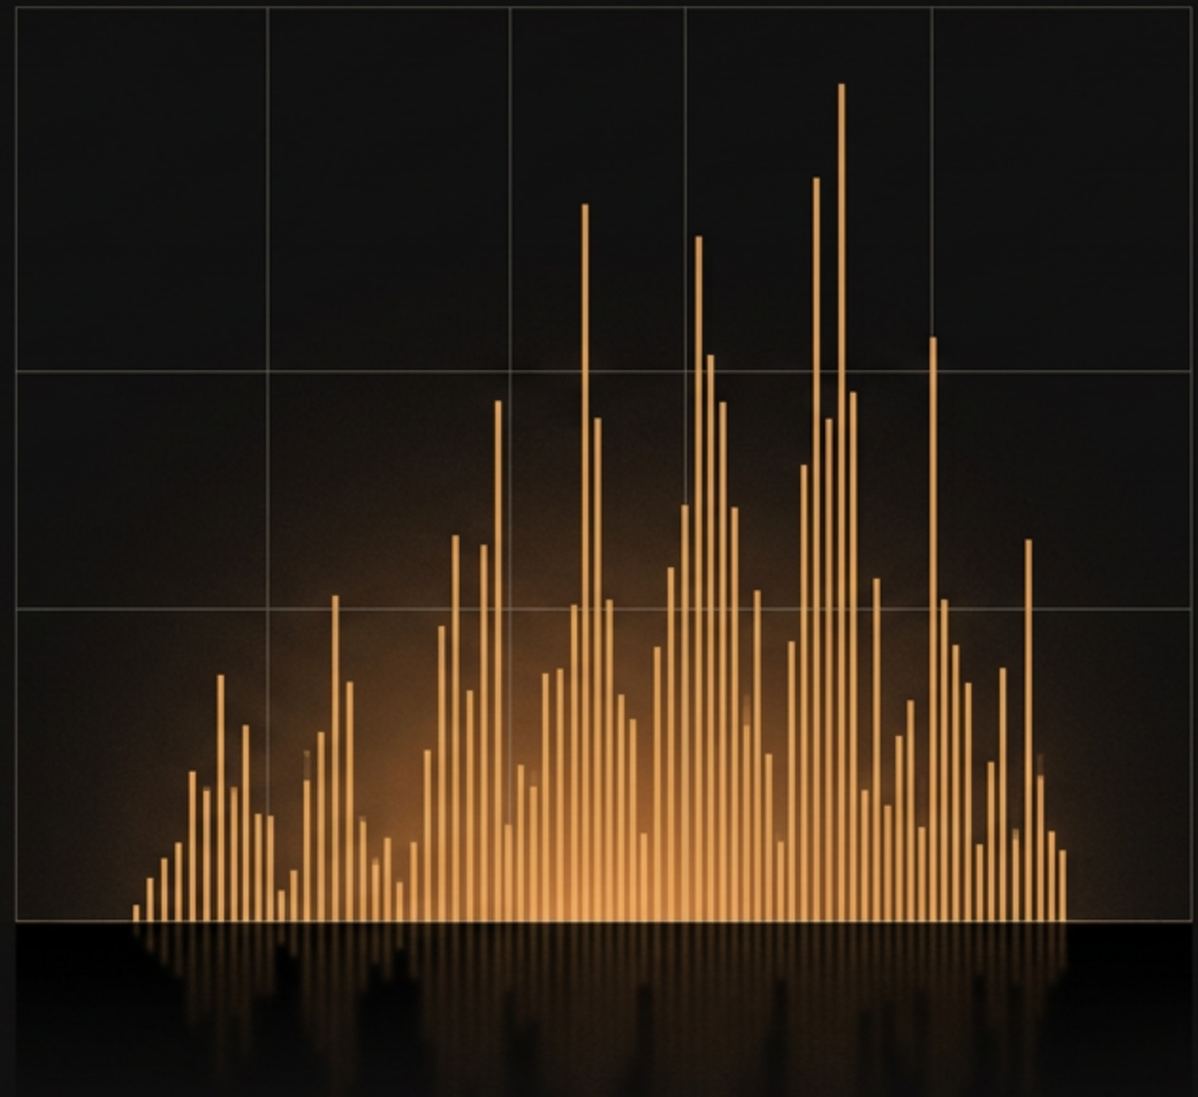

TA Lärm — commonly cited values

MARKET · GERMANY

32,455 German bars and pubs turn over €8 billion a year.

Plus about 2,000 live-music venues nationwide.

Sources: Eurostat NACE I5630, 2024 · Initiative Musik Club Study

BUSINESS MODEL

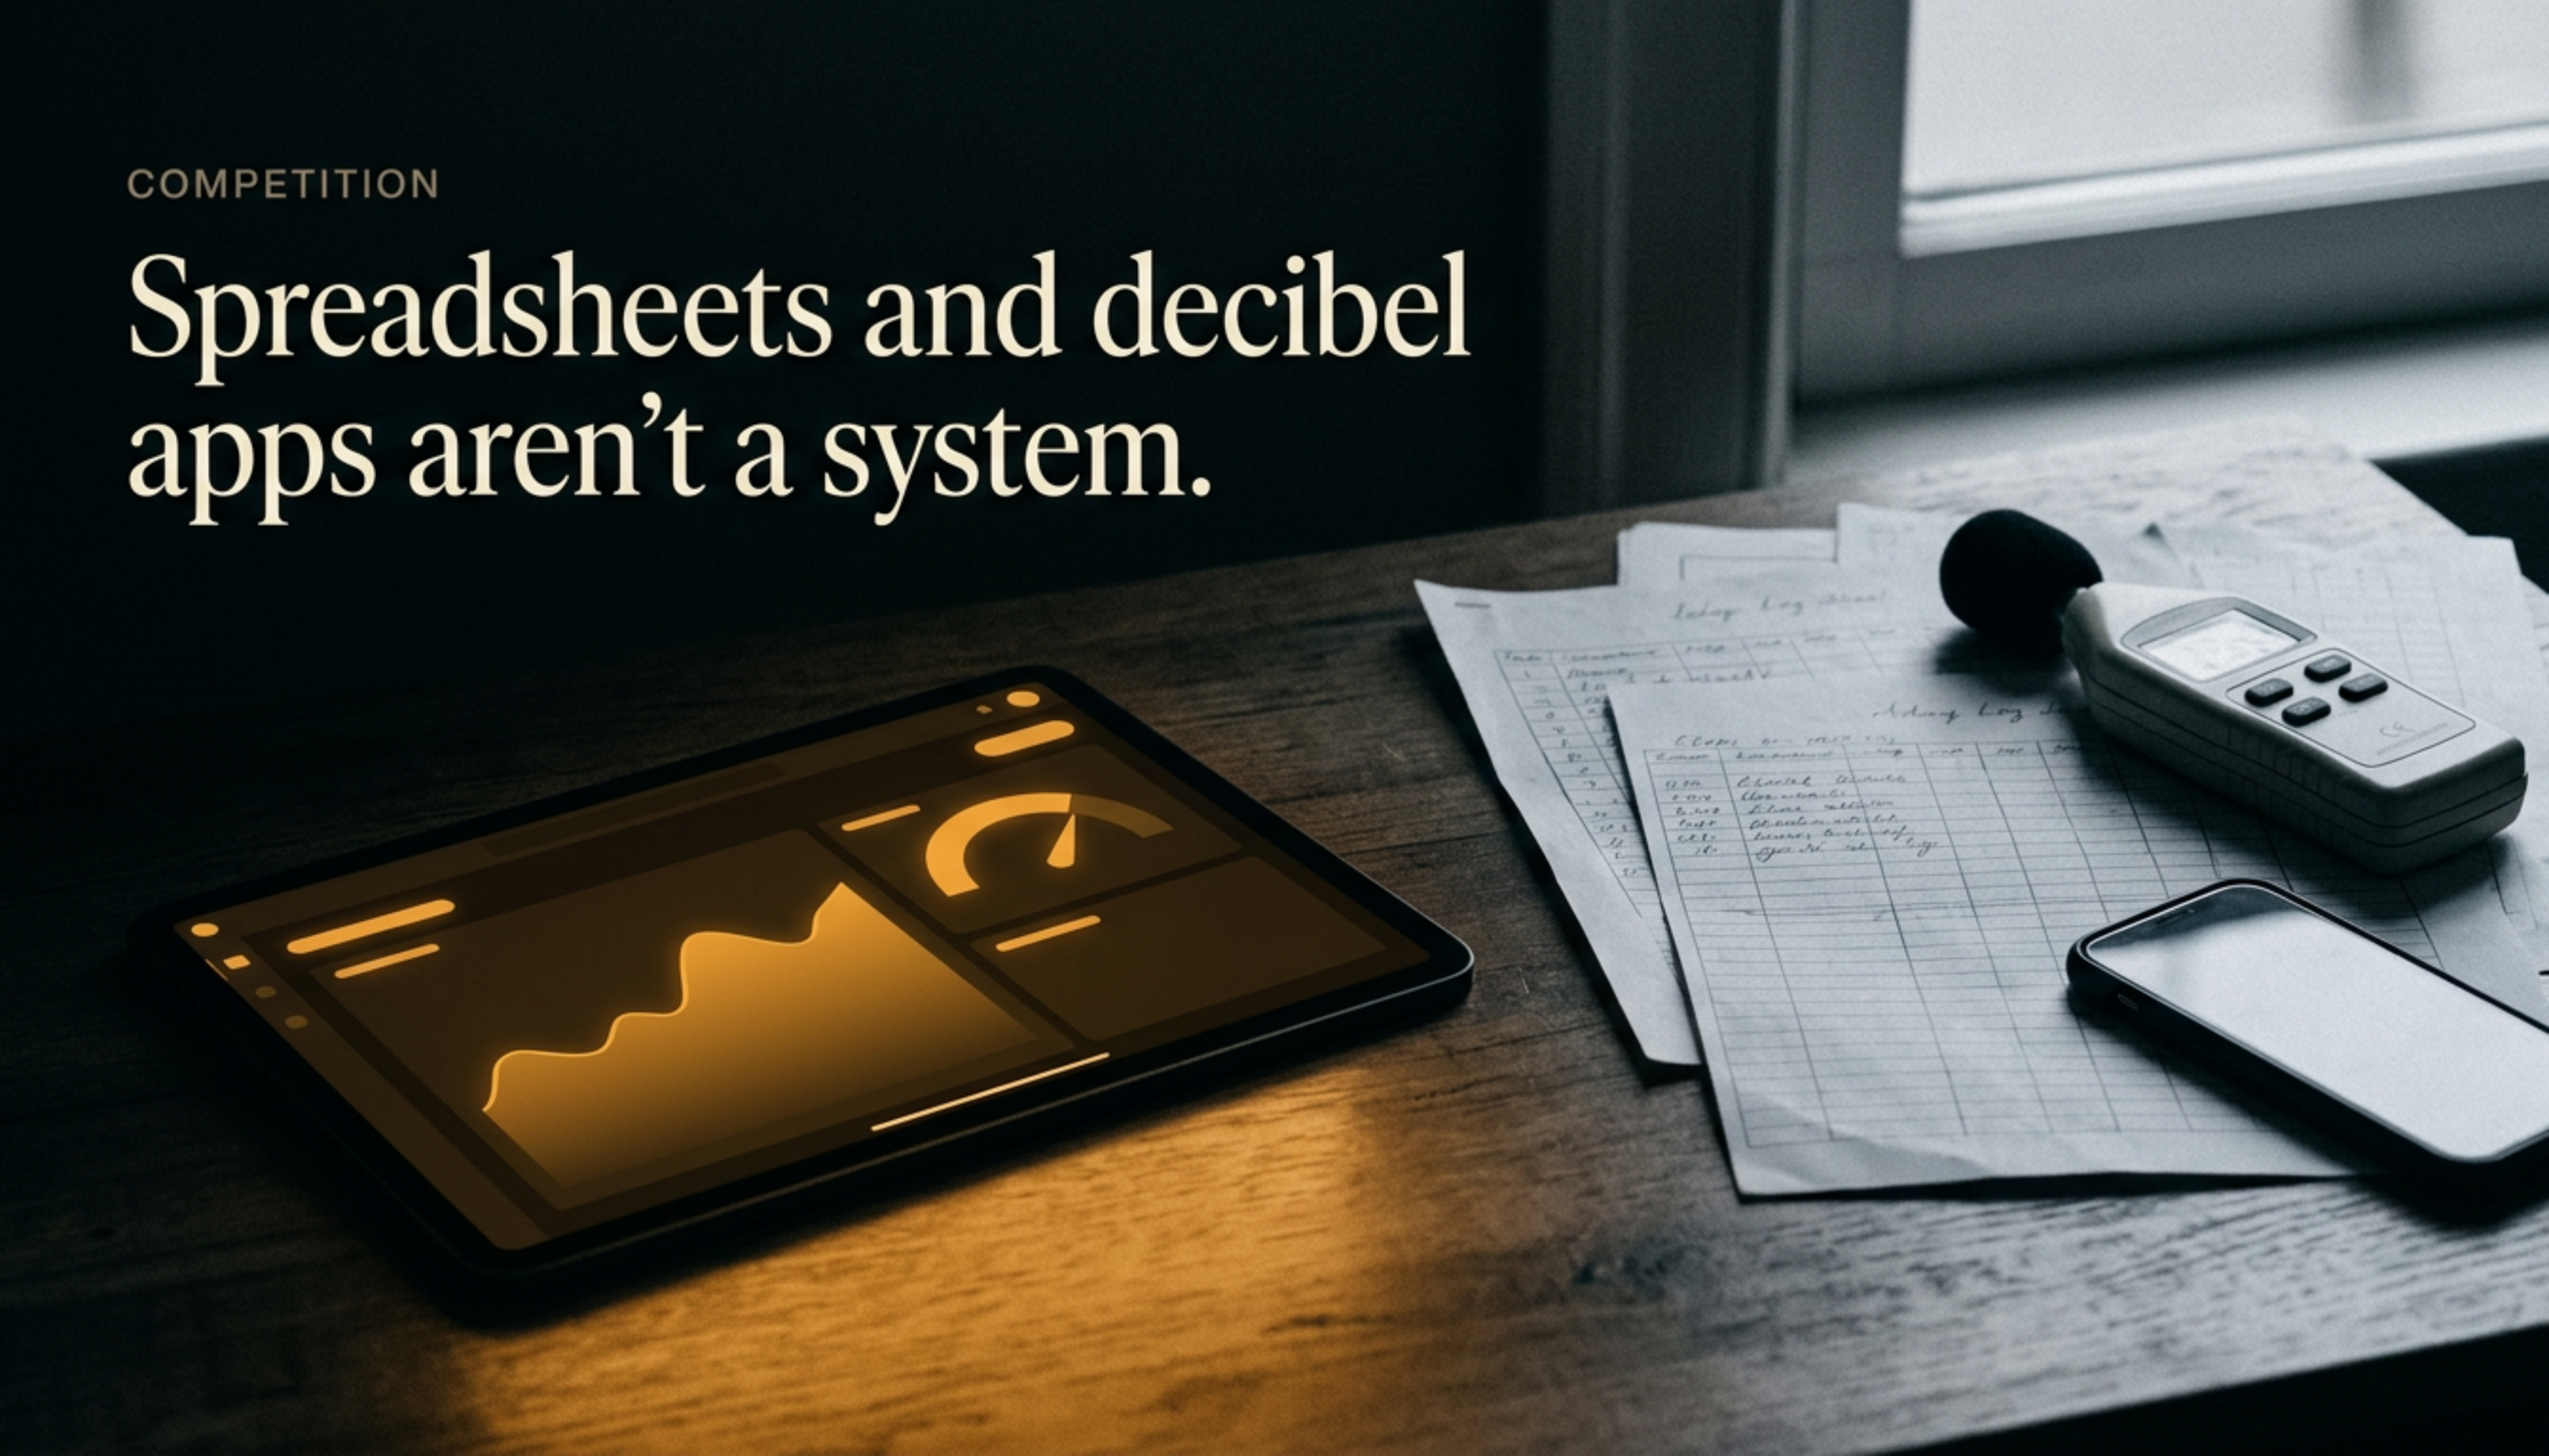

€149 a month per venue. Hardware from day one.

€199 per sensor · 120 venues already on the waitlist.

COMPETITION

Spreadsheets and decibel apps aren’t a system.

TEAM

Two builders who shipped the whole stack.
