The night economy is a data black hole.

Every venue generates a dataset nobody owns.

Why now: cheap sensors meet hard noise rules.

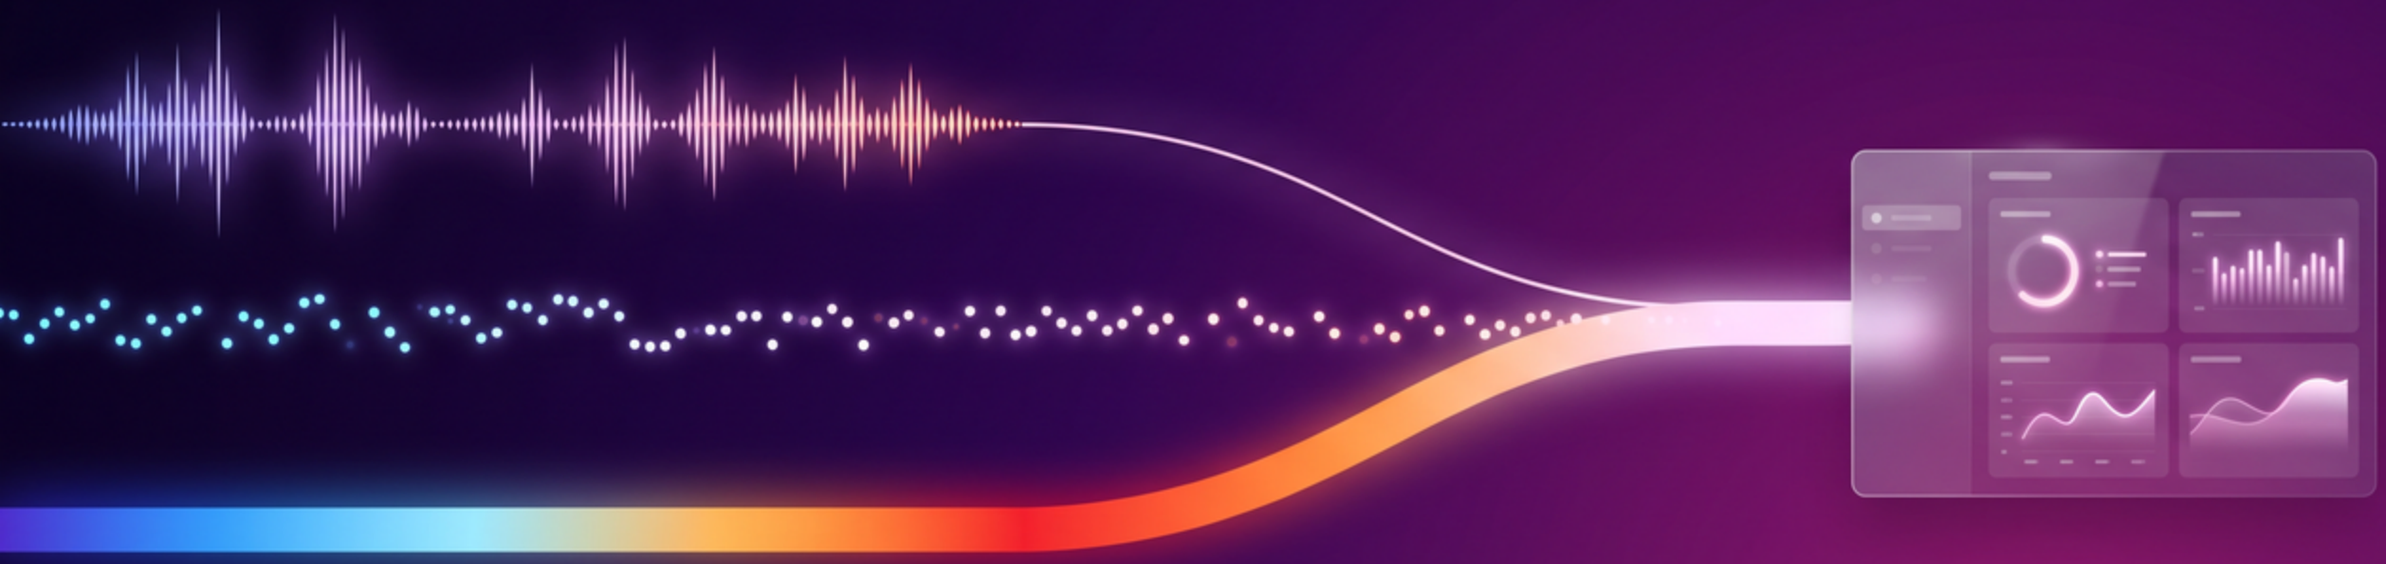

night limit at the nearest wall (TA Lärm)

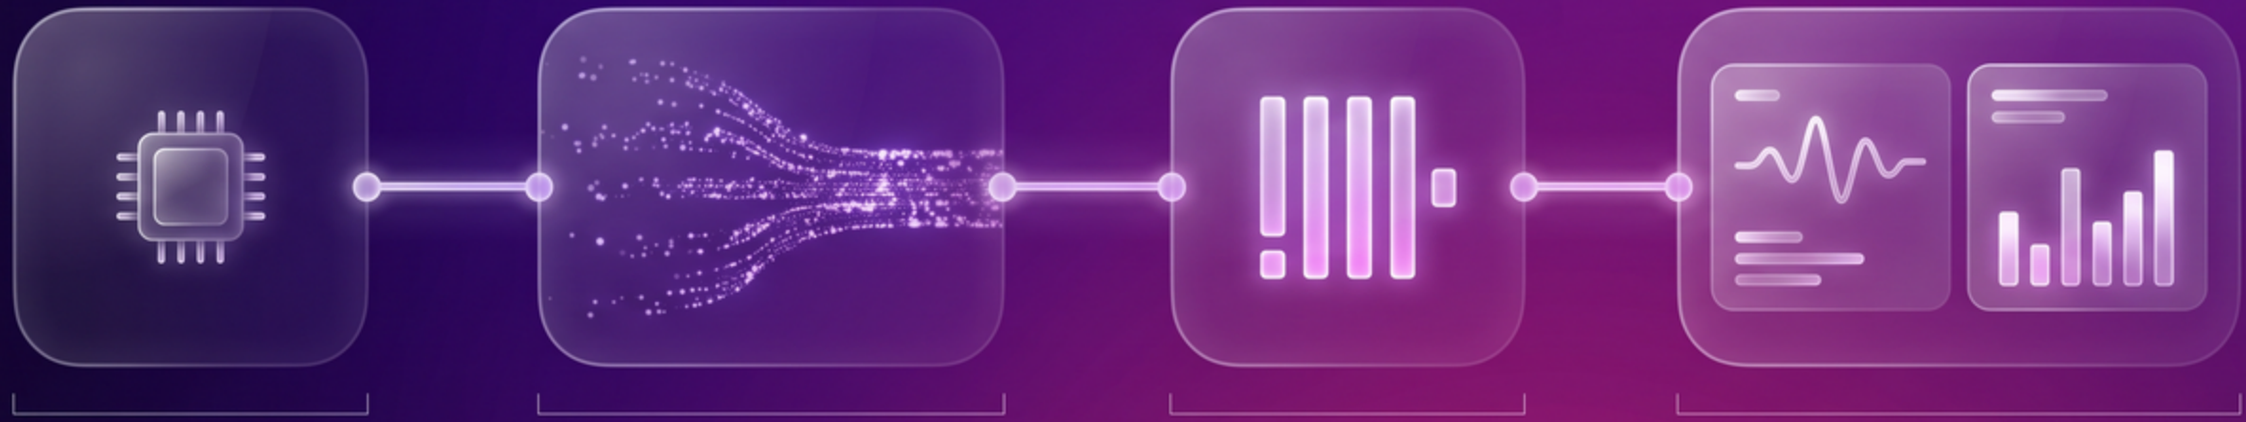

We instrument the night.

Sound, occupancy, environment — one stream per venue.

The data layer: firmware to ClickHouse to dashboards.

Dashboards

Applications compound on the layer: staffing, insurance, booking.

Categories are won by data networks, not features.

32,455 venues is the beachhead, not the ceiling.

€149 per venue, per month — the layer's first product.

Evidence before launch: venues already signed up.
