The insight you cannot unhear.

Most operators cannot name their best night. The night is measurable — and measurable, brandable, margin-positive nights are the whole business.

ALL COMPANY FIGURES INSIDE ARE PLACEHOLDERS · MARKET FIGURES SOURCED AND QUALIFIED

ONE NIGHT PAYS FOR THE WEEK — IF YOU CAN NAME IT

Most operators cannot name their best night.

Rosters are built for the average week. Orders are placed for the average Friday. But a month of nights is not an average — a handful of peaks do the work of many ordinary ones.

The peak is invisible, because the books close on the month. What is invisible cannot be priced. What cannot be priced cannot be grown.

ONE MONTH OF NIGHTS — WHICH ONE CARRIED IT?

Forty operators, one confession: nobody prices the night that pays them.

None of the forty could put a number on the night. The highest-yield asset on the P&L is run on feel.

“Our Friday is the busiest.”

“We guess from the door.”

“The ledger only knows the month.”

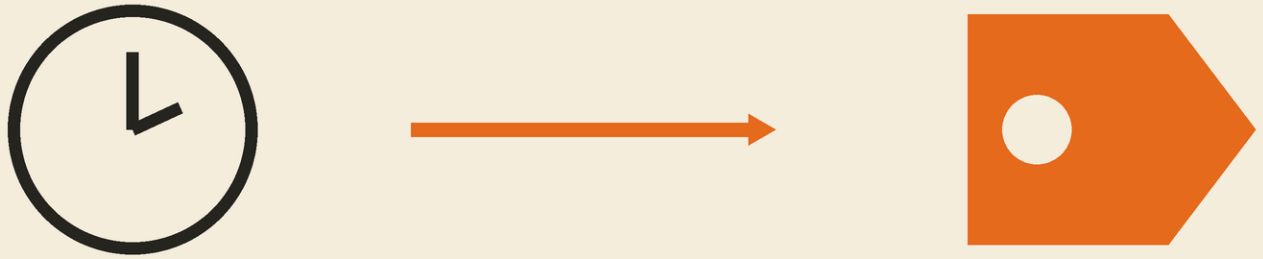

PARAPHRASED ANSWERS · ILLUSTRATIVE

40 VENUE INTERVIEWS CONDUCTED — 1 GLYPH = 1 INTERVIEW

PLACEHOLDER

A night is not a timeslot. It is a product with a margin.

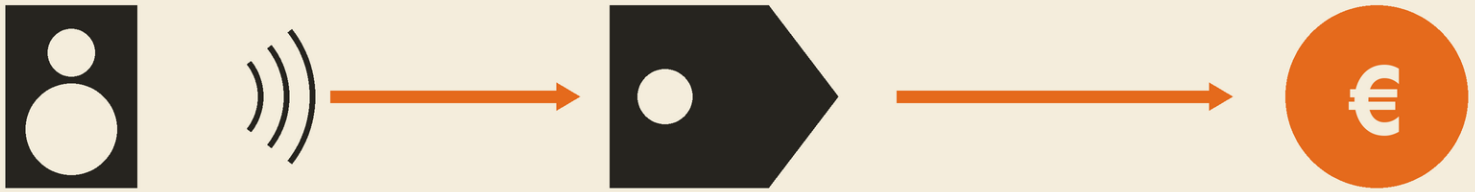

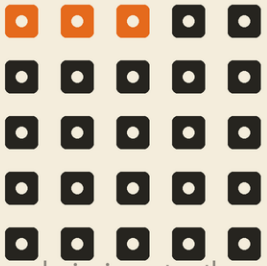

TIMESLOT: FRIDAY NIGHT

A PRODUCT: THE NIGHT, PRICED

You would not ship a product you never measure. Until the night is measured it cannot be priced, versioned or branded — it just happens to you.

Measured nights become branded nights — and branded nights defend margin.

25 SENSORS PRODUCED · 3 PILOT VENUES INSTALLING Q1 2027

PLACEHOLDER — REGISTER VALUES

The chain is not a theory. Hardware exists and pilots are being installed — the open question is what they will hear first.

You already pay for this data. You have never been able to hear it.

THE ROOM ALREADY SPEAKS: BODIES · BASS · HEAT · DOORS

Security line-items. Staffing guesswork. Decibel disputes with the neighbourhood. Slow Tuesdays programmed on a hunch. Operators already pay, every night, for signals they cannot read.

5 DESIGN-PARTNER LOIs SIGNED

PLACEHOLDER

Germany's night economy turns over €8.0 billion a year. Median venues keep about 3% of it.

MEDIAN LIVE-MUSIC VENUE, 2019: TURNOVER €240,000 = 29 GLYPHS + 1 · PROFIT €8,000 = 1 ORANGE GLYPH · 1 GLYPH = €8,000

Sector context, as sourced: 32,455 bars-and-pubs enterprises turning over €8.049 billion (Eurostat NACE I5630, 2024); roughly 2,000 live-music venues turning over €1.1 billion and employing 45,000 people (Initiative Musik Club Study, 2019, pre-pandemic).

SOURCED — SEE FACTS FILE ART_MYOLRWIM

FIGURES NOT SUMMED — CLASSIFICATIONS OVERLAP · ~3% IS A DERIVED RATIO, NOT A SOURCED FIGURE

A €8.0B market run at 3% median margin does not need more volume. It needs precision.

Noise rules make measurement the price of staying open.

40 dB(A)

PURE RESIDENTIAL

NIGHT 22:00–06:00, MEASURED AT THE PROTECTED RECEPTOR — NOT INSIDE THE CLUB (TA LÄRM; VERIFY AGAINST OFFICIAL TABLE 1 BEFORE EXTERNAL USE)

SOURCED — SEE FACTS FILE ART_MYOLRWIM

Honesty rule: no verified national statistic exists for noise-driven venue closures. Noise is documented displacement risk — resident complaints, arrival, departure and smoking-area noise, land-use conflict (LiveKomm "Red List"; Live-DMA / MIZ). A venue that can prove its emissions has an argument to stay open. A venue that cannot, argues with the neighbourhood.

The insight demands instrumentation, so the product writes itself.

The terms are on the table: sign the SAFE, run the pilot, count the night.

One register of placeholders, one sourced facts file, one honesty rule.

01 · COMPANY NUMBERS

All sixteen are invented stand-ins from the Placeholder Metrics Register (wb_cg3xEK66 / art_VsrEzRTw). Every one stays tagged PLACEHOLDER on the slide where it appears.

02 · MARKET + REGULATION

Drawn only from the sourced facts file (art_mYolRwiM): Eurostat NACE I5630 (2024); Initiative Musik Club Study 2019 via miz.org; TA Lärm receptor limits (verify before external use). Sensor-market benchmarks deliberately excluded — commercial estimates, incompatible definitions.

03 · HONESTY RULE

There is no verified national statistic for noise-driven venue closures. This deck frames noise as documented displacement risk — never as an invented percentage.
